## **Risk and Liquidity (Clarendon Lectures in Finance) Hyun Song Shin**

This book presents the Clarendon Lectures in Finance by one of the leading exponents of financial booms and crises. Hyun Song Shin's work has shed light on the recent global financial crisis and he has been a central figure in the policy debates.

The paradox of the global financial crisis is that it erupted in an era when risk management was at the core of the management of the most sophisticated financial institutions. This book explains why. The severity of the crisis is explained by financial development that put marketable assets at the heart of the financial system, and the increased sophistication of financial institutions that held and traded the assets. Step by step, the lectures build an analytical framework that take the reader through the economics behind the fluctuations in the price of risk and the boom-bust dynamics that follow. The book examines the role played by market-to-market accounting rules and securitisation in amplifying the crisis, and draws lessons for financial architecture, financial regulation and monetary policy.

This book will be of interest to all serious students of economics and finance who want to delve beneath the outward manifestations to grasp the underlying dynamics of the boom-bust cycle in a modern financial system - a system where banking and capital market developments have become inseparable.
