Integrated Neuroscience and Neurology: A Clinical Case History Problem Solving Approach Elliott M. Marcus, Stanley Jacobson, Thomas D. Sabin

Integrated Neuroscience argues that in order to make an intelligent diagnosis and provide a rational treatment nervous system disorders, it is necessary to answer the basic questions of clinical neurology. Where is the disease process located, and what is the nature of the disease process? For students to answer these questions, the authors first review the makeup of the cells within the central nervous system and the development of the regions within the central nervous system. A detailed anatomical overview of the nervous system, starting at the spinal cord, proceeding to the brain stem, diencephalon and cerebrum follows. This textbook focuses not only on localized diseases caused by infectious diseases, trauma, tumors, and vascular lesions within the central nervous system, but also these diseases within the systems of the brain and spinal cord. Over 250 real cases with associated MRI or CTs and any pathological findings from these patients illustrate numerous disorders and fully explain the nature of the pathology. The authors have also included six problem solving sessions in which the student must identify the ongoing disease process, what caused it, and how best to treat it. Throughout the discussion in this text the authors also correlate the neurological findings to the underlying anatomy of the region.
