Structured Peer-to-Peer Systems: Fundamentals of Hierarchical Organization, Routing, Scaling, and Security

The field of structured P2P systems has seen fast growth upon the introduction of Distributed Hash Tables (DHTs) in the early 2000s. The first proposals, including Chord, Pastry, Tapestry, were gradually improved to cope with scalability, locality and security issues. By utilizing the processing and bandwidth resources of end users, the P2P approach enables high performance of data distribution which is hard to achieve with traditional client-server architectures. The P2P computing community is also being actively utilized for software updates to the Internet, P2PSIP VoIP, video-on-demand, and distributed backups. The recent introduction of the identifier-locator split proposal for future Internet architectures poses another important application for DHTs, namely mapping between host permanent identity and changing IP address. The growing complexity and scale of modern P2P systems requires the introduction of hierarchy and intelligence in routing of requests.

Structured Peer-to-Peer Systems covers fundamental issues in organization, optimization, and tradeoffs of present large-scale structured P2P systems, as well as, provides principles, analytical models, and simulation methods applicable in designing future systems. Part I presents the state-of-the-art of structured P2P systems, popular DHT topologies and protocols, and the design challenges for efficient P2P network topology organization, routing, scalability, and security. Part II shows that local strategies with limited knowledge per peer provide the highest scalability level subject to reasonable performance and security constraints.

Although the strategies are local, their efficiency is due to elements of hierarchical organization, which appear in many DHT designs that traditionally are considered as flat ones. Part III describes methods to gradually enhance the local view limit when a peer is capable to operate with larger knowledge, still partial, about the entire system. These methods were formed in the evolution of hierarchical organization from flat DHT networks to hierarchical DHT architectures, look-ahead routing, and topology-aware ranking. Part IV highlights some known P2P-based experimental systems and commercial applications in the modern Internet. The discussion clarifies the importance of P2P technology for building present and future Internet systems.

From reader reviews:

Ellen Weiss:

Nowadays reading books are more than want or need but also become a life style. This reading addiction give you lot of advantages. Advantages you got of course the knowledge even the information inside the book which improve your knowledge and information. The information you get based on what kind of reserve you read, if you want send more knowledge just go with knowledge books but if you want really feel happy read one together with theme for entertaining like comic or novel. Often the Structured Peer-to-Peer Systems: Fundamentals of Hierarchical Organization, Routing, Scaling, and Security is kind of reserve which is giving the reader capricious experience.

Denise Zimmerman:

Hey guys, do you desires to finds a new book you just read? May be the book with the subject Structured Peer-to-Peer Systems: Fundamentals of Hierarchical Organization, Routing, Scaling, and Security suitable to you? Often the book was written by well known writer in this era. The book untitled Structured Peer-to-Peer Systems: Fundamentals of Hierarchical Organization, Routing, Scaling, and Security is the main one of several books which everyone read now. This kind of book was inspired a number of people in the world. When you read this reserve you will enter the new dimension that you ever know prior to. The author explained their thought in the simple way, and so all of people can easily to understand the core of this publication. This book will give you a lot of information about this world now. To help you to see the represented of the world in this book.

Clayton Bruce:

Reading a book to be new life style in this yr; every people loves to learn a book. When you go through a book you can get a great deal of benefit. When you read ebooks, you can improve your knowledge, mainly because book has a lot of information onto it. The information that you will get depend on what forms of book that you have read. If you want to get information about your analysis, you can read education books, but if you want to entertain yourself you are able to a fiction books, these us novel, comics, in addition to soon. The Structured Peer-to-Peer Systems: Fundamentals of Hierarchical Organization, Routing, Scaling, and Security offer you a new experience in looking at a book.

Carl Johnson:

Don't be worry in case you are afraid that this book will filled the space in your house, you can have it in e-book approach, more simple and reachable. This kind of Structured Peer-to-Peer Systems: Fundamentals of Hierarchical Organization, Routing, Scaling, and Security can give you a lot of buddies because by you investigating this one book you have factor that they don't and make a person more like an interesting person. This particular book can be one of a step for you to get success. This guide offer you information that maybe your friend doesn't realize, by knowing more than additional make you to be great individuals. So ,

why hesitate? Let's have Structured Peer-to-Peer Systems: Fundamentals of Hierarchical Organization, Routing, Scaling, and Security.
