Clinical and Methodological Issues in Cardiovascular Psychophysiology

Clinical and Methodological Issues in Cardiovascular Psychophysiology

This volume arose from a discussion meeting entitled "Applied Psychophysiology in Cardiovascular Research: Clinical and Methodological Issues" held in May 1984 in Linz, Federal Republic of Germany. The meeting was organised by the Commission of the European Communities' Concerted Action on Quantification of Parameters for the study of Breakdown in Human Adaptation, in conjunction with the Department of Internal Medicine, University of Bonn. The Concerted Action is part of the Medical and Public Health Research Programme of the CEC, and its purpose is to encourage multidisciplinary research into the development, refinement and standardisation of parameters used to measure psychosocial, physiological and endocrinological aspects of breakdown. This meeting is one of a series in which detailed consideration is given to specific methodological issues within the field of research linking stress with disease. However, the contributions to this book have been extended and restructured considerably since their presentation at the meeting. Additional chapters have been prepared that address important issues which were not discussed at the meeting itself. The editors are grateful to the Commission of the European Communities and the University of Bonn for their support, and also acknowledge the financial assistance of Bayer AG, Ciba/Geigy, Hoffman-La Roche, Boehringer Ingelheim and Verla-Pharm. We extend special thanks to Sue Wilson for the care with which she has prepared the manuscript for publication.
