What is reality? Why do we have thoughts and how is matter created? Questions and more questions unfold anew each day. Just when we think we've figured it all out, a new theory always merges proving wrong the previous concepts and ideas. We continue to play the game of life where rules seem to change from one moment to another. Will the truth about who we are and why we were created be uncovered one day? We are perhaps closer to the truth than we think. We probably just need a little twist on our vision: Matter, antimatter, ideas, God, souls had always been right in front of us, all around us, and inside us. In this book the author Ardiana Bani is connecting some previous knowledge discussed by scientists and philosophers in eras such as physics and metaphysics. Doing this, the author is giving the reader a new view of reality, the view that accepts both the physical and spiritual world. It may sound a bit paradoxical of how an ordinary math and science teacher would have discovered a way to answer hard philosophical questions. However, the answer to this paradox may be found in the fact that it probably is necessary to see all the previous theories from a middle point of view. Maybe it was necessary to see this reality through the eyes of an ordinary but not so ordinary person. When that usual afternoon, the author Ardiana Bani saw our reality under a different light, she got one humble insight "We don't have to reinvent the wheel. There is no right or wrong theory. We just have to change our point of view to realize how all these theories fit into one another." To explain this she developed the hypothesis of antimatter, which by using scientific formulas and logical arguments also proves why opposites exist and must exist in order to maintain the balance between matter and antimatter in the universe. She invites you to discover more about this balance in the pages of this book.
